

The SRS ALARA Center would like to invite interested DOE and commercial sites to participate in the 1st SRS ALARA Workshop. The workshop is open to both attendees and presenters. The focus will be education and information based on applied ALARA programs.

The ALARA Center at SRS is staffed by radiological protection professionals responsible for keeping abreast of new equipment, technologies and techniques to support radiological work with cost effective solutions. There are a variety of innovative items on display to allow visitors the opportunity to use and borrow select items for field use. The staff coordinates with vendors and onsite personnel to arrange demonstrations and assist in evaluation, procurement, and implementation of new equipment and materials. Targeted are opportunities in waste minimization and pollution prevention, radiological hazard reduction and safe, cost effective operations.
