

## Girls Introduced to Engineering

- A special event was recently held to provide an opportunity for local female students to explore engineering as a career.
- “Introduce a Girl to Engineering Day” was developed to help ease the approaching shortage of engineers.
- About 30 girls from area middle schools, used games and hands-on activities to learn how natural problem-solving abilities form the basis for engineering skills.
- This program was sponsored by the WSRC Team, The Society of Women Engineers, and other related professional societies.

Participants compete in pipe crawler races to learn how specialty equipment works.
