For Immediate Release

SRS Integrated Safety Management Workshop “Family Night”

AIKEN, S.C. – Sept. 8, 2010 –Savannah River Site (SRS) employees are sponsoring a free safety workshop for Central Savannah River Area residents, Wednesday, Sept. 15, 4-9 p.m., Augusta Marriott & Convention Center.

Your family and friends are invited to participate in the activities and enjoy the entertainment being offered by SRS employees. Behavior Based Safety Jeopardy; Spin the Wheel-Teaching Safety Procedures; Hazards and Driving Safety; and Bean Bag-Wellness are examples of the extensive array of interactive displays being offered.

The Family Night safety workshop is a product of a four-day Integrated Safety Management (ISM) Champions Workshop sponsored by the Department of Energy-Savannah River Operations Office (DOE) and National Nuclear Security Administration (NNSA)-Site Office and supported by SRS prime contractors, Savannah River Nuclear Solutions, LLC; Savannah River Remediation; Shaw/Areva MOX Services, LLC.; Parsons; and the Wackenhut-Savannah River Site Team; along with the U.S.D.A. Forest Service-SR and Savannah River Ecology Laboratory.

As part of the evening’s events, Billy Robbins, professional speaker and founder of “Hooked On Safety®,” will tell the audience how he lost both hands when he made contact with a 7,200-volt power line while working on an aerial cable. His presentations have yielded immediate and positive long lasting results related to safety. Billy is internationally recognized as one of the foremost motivational speakers related to safety. His humorous but direct approach validates that an accident free workplace or home is not just a goal; it can become a reality.

A small venue, musical duo, known as “Loose Change,” will perform during Family night from 4-7 p.m. Loose Change plays a mellow mix of 60’s music to current tunes.

The Integrated Safety Management system is the tool used by DOE and NNSA to build a safe, secure and environmentally sound workplace. ISM recognizes the need for developing an integrated environmental, health and safety management system that focuses on proactive measures to protect employees, the community and our environment.

The ISM Workshop theme, "Pathways to New Missions," graphically depicts how various areas of our nuclear-based business have successfully created new territory in an unfamiliar landscape, using the Integrated Safety Management System. Last year's ISM conference hosted nearly 1,000 attendees, including environmental, health, safety and quality (ESH&Q) professionals from DOE sites across the United States, all looking for the latest in ESH&Q products, technologies, and services.

For more information, visit the ISM Workshop website:
