

---

**Front Cover** — Chicasaw plums (*Prunus angustifolia*) can be found in powerline rights-of-way, abandoned agricultural fields, and other mostly treeless, sandy areas around SRS. The colorful fruit is eaten by a variety of wildlife, and is edible to humans—usually in the form of sauces, pies, preserves, jams, and jellies. Chickasaw plum shrubs typically form dense thickets that provide valuable shelters and nesting habitats for birds. This year's cover photograph was taken in SRS's C Area by Al Mamatey of Savannah River Nuclear Solutions' Regulatory Integration & Environmental Services Department. The cover was designed by Eleanor Justice of the company's Records Management and Policy Section/Communications and Knowledge Resource Development Group.
