

Next Stop: Savannah River Site for a “A Trip Down Under”

Discover the science of soil and the mysteries beneath our feet as students take **A Trip Down Under** at the Savannah River Site.

- Investigate soil, layer by layer, in the Sandhills Region of the Carolinas and Georgia
- Learn of weathering and the role it plays in soil creation
- Understand the effects of soil quality on the characteristics of an ecosystem
- Take a look at how the earth's materials, as natural resources, are used for common products in society
- Learn of an archeological find at the Savannah River Site that remembers history through an artist known as "Dave".

Round Trip - 20 Minutes

Appropriate for elementary and middle school students
