Presentation to the Savannah River Site Citizens Advisory Board Waste Management Committee

Tank Closure Update
June 12, 2012

Sherri R. Ross
Program Manager, Waste Removal and Tank Closure
Savannah River Operations Office
U.S. Department of Energy
Purpose

• Provide update of tank closure activities
  • F Tank Farm Closure
    • Near Term Objective
    • Agency Decisions since November 2011
      • DOE actions to address NRC’s Technical Evaluation Report
  • Grouting of Tanks 18 and 19
  • Looking Forward
    • F Tank Farm
    • H Tank Farm

• Fulfill Waste Management Committee 2012 Work Plan topic
Savannah River Site – F-Tank Farm
Near Term Objective

Operationally close SRS Tanks 18 and 19 by the Federal Facility Agreement date of December 31, 2012

Close the tanks in a way that is:

- Safe
- Technically sound
- Risk informed
- Compliant with regulations and commitments
DOE-SR’s Regulatory Documentation Path to Waste Tank Removal From Service (11/15/2011)

NRC Monitoring in conjunction with SCDHEC

Approved

In Progress
Section 3116(a) – “Consultation”

• NRC provides technical consultation to inform the Secretary of Energy’s Waste Determination decision

Section 3116(b) – “Monitoring”

• NRC, in coordination with SCDHEC, monitors disposal actions taken by DOE pursuant to Section 3116(a)(3)(A) and 3116(a)(3)(B)
Summary of NDAA §3116

- DOE published Draft 3116 Basis Document for Closure of F-Tank Farm (September 30, 2010)
  - Remained “neutral” on overall FTF conclusion due to bulk of tanks not yet cleaned and characterized
  - Some positive observations supporting DOE performance assessment and related processes, and made recommendations for potential additional work
  - Agreed that closure of Tank 19 can proceed
  - Recommended Tank 18 closure be delayed to:
    - Provide additional model support and reduce uncertainty
    - Explore practicality of additional waste removal
- DOE considered and addressed NRC TER consultation recommendations
- Secretary of Energy, based on the reasons set forth in the FTF 3116 Basis Document, issued the Section 3116 Determination for Closure of F-Tank Farm at the Savannah River Site on March 27, 2012
Additional Model Support and Reduced Uncertainty

- Pu Solubility Peer Review
- Tanks 18/19 Special Analysis
  - Revision of Waste Release Model (Nuclear Energy Agency Database)
  - Series of additional science studies
  - Parametric Pu Solubility and $K_d$ studies
  - Pu Speciation Experiments
  - New sensitivity modeling runs
Additional Waste Removal Impractical

- Completed a System Engineering Evaluation and Cost-Benefit Analysis evaluating practicality of further waste removal
- Results demonstrate additional cleaning is not practical
  - Worker dose ~ 3.2 person-rem and $38M
  - Worker dose 20X greater than 50 yr public dose avoidance in 10,000-year performance period
  - $253M/rem reduction is 126,000X higher than NRC guidance of $2K/rem
  - Consideration of bounding 500 mrem/hr peak dose around 40,000 yr does not alter conclusions (Note: lower dose in Special Analysis sensitivity cases)

Other Activities Regarding NRC Recommendations

• Performed a formal Features, Events, and Processes review for FTF Performance Assessment

• Updated Liquid Waste Performance Assessment Maintenance Plan with long-term activities

• Documented post-operational closure technologies available to reduce long term performance risk

• Added a reference in the 3116 Basis Document to clearly document how DOE addressed each NRC recommendation

Documents posted for public access at http://sro.srs.gov/f_htankfarmsdocuments.html
DOE-SR’s Regulatory Documentation Path to Waste Tank Removal From Service (6/12/2011)

- Final Configuration Report
- Remove Tank System from Operating Permit

NRC Monitoring in conjunction with SCDHEC

- Performance Assessment
- Composite Analysis
- DOE Closure Documentation Tier 1

- DOE Closure Authorization Tier 2
- South Carolina Hazardous Waste Permits Modification (SCDHEC)
- South Carolina Hazardous Waste Permits Modification (SCDHEC)

- Interim Record of Decision
- Interim Record of Decision
- Waste Determination
- Waste Determination
- NRC Consultation Technical Report
- NRC-DOE Tier 1 Waste Determination Report

- DOE Supplemental Analysis
- NEPA Report of Decision
- NEPA Supplemental Analysis
- NEPA Report of Decision

- DOE-SR’s Regulatory Documentation Path to Waste Tank Removal From Service (6/12/2011)

- Approved
- In Progress

Legend
- DOE
- EPA
- SCDHEC
- NRC
Grouting of Tank 19

At ~9:00 am on 4/2/2012, grout was first introduced
Grouting of Tank 18

At ~8:00 am on 4/3/2012, grout was introduced in Tank 18.

SCDHEC staff made the trip to the Site from Columbia to witness this historic day for DOE and the State.
Closure Module Field Status
(as of close of business on)
June 7, 2012
Calendar Day 67 of 176

Notes:
- 1565 truck loads placed.
- No safety events.
- Successfully replaced Tank 18 and 19 Tremies as scheduled.
- Continued installation of supplemental ventilation on Tank 19.
- Sunny with a chance of rain in the weather forecast next week.
- Next week pouring: M/T/W/T/F

Tank 18
- 67 % full
- 196 trucks this week
- 699 trucks total

Tank 19
- 83 % full
- 0 trucks this week
- 866 trucks total
Looking Forward: F-Tank Farm

- Tank 5 has been cleaned, sampled and characterized
- Tank 6 has been cleaned, sampled, and characterized
- A State-approved Closure Module must be prepared and approved for Tanks 5 & 6
- Tank 5 and 6 isolation…..
- Grouting preparations/field activities…..

Request CAB consider closing Recommendation #284 – Need to Continue Ongoing Progress for Closure of Tanks 18 and 19

Goal: Optimize the Tank 5 and 6 schedule to enable operational closure well before the Fiscal Year 2015 FFA milestone
Looking Forward: H-Tank Farm

- An HTF General Closure Plan and associated HTF Groundwater Monitoring Plan under preparation
- A revision to the HTF Performance Assessment is underway
  - Public comments on Revision 0 being incorporated
  - Lessons learned from FTF and Saltstone being incorporated
- Consultation with NRC on HTF Draft 3116 Basis and revised Performance Assessment planned CY 2013

Strategy: Model and build upon the FTF document success to expedite the preparation, review, and approval process for the HTF documents
