

NOTE: Tritium is monitored with continuous real-time instrumentation. Results of this online monitoring are not included with the analytical results provided in data table 4-1.

NOTE: Releases of Kr-85, C-14 and H-3 from the H-Area Canyon Facility (292-H) were calculated based on the "burn-up" of spent fuel processed in that facility. Results from these calculations are not included in this analytical data table.

NOTE: "Sig" is significance, with "Yes" meaning detectable and "No" meaning less than the analytical method detection limit. If the uncertainty (standard deviation) is large, the significance may also be set to "No"

NOTE: Tritium is monitored with continuous real-time instrumentation. Results of this online monitoring are not included with the analytical results provided in data table 4-1.

NOTE: Releases of Kr-85, C-14 and H-3 from the H-Area Canyon Facility (292-H) were calculated based on the "burn-up" of spent fuel processed in that facility. Results from these calculations are not included in this analytical data table.

NOTE: "Sig" is significance, with "Yes" meaning detectable and "No" meaning less than the analytical method detection limit. If the uncertainty (standard deviation) is large, the significance may also be set to "No"
